ELI v2.0 — New User Installation Guide

> **Updated for v2.4.84.** One hardware-aware GUI wizard.
> Releases: https://github.com/ShadowESC95/ELI_v2.0/releases/tag/v2.4.84
> Full guide: **`first time Installation/INSTALLATION_GUIDE.md`**

Version: 2.4.84

What the wizard installs (core)

Env + llama-cpp (CPU/CUDA/Vulkan/Metal by hardware) + databases + **nomic** + **Piper/Whisper** + starter **chat GGUF**. Those stages **hard-fail** until present. Desktop shortcuts where supported. OS extras (mpv, OCR, ...) are best-effort.

Pick a package

Package	First click
AppImage (Linux)	`chmod +x` → run
`ELI-Setup-*.exe` (Windows)	Run Setup
Frozen Windows zip	`ELI\ELI.exe`
`.dmg` (macOS)	Applications
Portable Linux	`./ELI_Setup.sh`
Git clone	`./scripts/eli_setup.sh`

Windows note

Desktop icon is **ELI only**. Server is Start Menu only. Second GUI instance is blocked.

Phone / tablet

Use Settings → Web Server on the host PC. **Home** tab = MQTT devices (not Home Assistant).
