E. The flow in one line	5

Blueprint – ELI MKXI Full Architecture (ASCII)

The entire system in one drawing, plus the module tree and data layout. Grounded in the real source (see `architecture.md` for prose, `diagrams.md` for the pipeline/memory/gating close-ups). Every layer and box maps to a real path.

A. Full system — layered block diagram

habits_scheduler/habits – routines	scheduler · task_bus – jobs
background_tasks – async heavy work	reflection loop ambient_vision loop
scheduled_tasks (durable overnight/timed)	world_event_bus ← confidence events

OUTPUT ← output_governor / sanitiser ← inference ← (any path)
 |
 └→ TTS (Piper) / GUI render

B. The 15 agents

AGENT BUS (cognition/agent_bus.py :: AgentBus.dispatch → DispatchResult)
 selects a set → runs on a dependency DAG → aggregates grounding_confidence

BusMemoryAgent	recall: SQLite/FTS5/FAISS → context
KnowledgeGraphAgent	entities/relations from the KG
SystemAgent	runs executor actions (WEB_SEARCH, RUNTIME_AUDIT, ...)
OrchestratorAgent	plan / coordinate grounded synthesis
FileCodeAgent	searches the codebase for code-grounded answers
IntrospectionBus...	live runtime + gathers identity/awareness audits as evidence (persona summarises – never a data dump)
CapabilityAgent	capability manifest (what ELI can do)
ReflectionAgent	session reflection / insights
ProactiveAgent	proactive patterns / signals
HabitAgent	learned habits
SelfImprovementAgent	self-improvement state
FrontierAgent	frontier reasoning hooks
PluginAgent	dispatch to registered plugins
VoiceAgent	STT/TTS engine state
CriticAgent	second-tier verifier: checks retriever agents' output
+ CodeAgent (16th)	SEPARATE pipeline: plan→search→verify→repair
eli/coding/agent	(CODE_SOLVE / GENERATE_SCRIPT) – not a bus agent

C. Module tree (LOC · key files · role)

```
